

# 🔧 File Manager Package – Quick & Easy Installation

## 1. 📦 Download & Extract

- **Download** the ZIP file of the package.
  - **Extract** it into:  
packages/Rohan/FileManager at the **root of your Laravel project**.
- 

## 2. ⚙️ Update `composer.json`

Add this inside your `composer.json`:

```
"repositories": [  
    {  
        "type": "path",  
        "url": "packages/Rohan/FileManager"  
    }  
],  
"require": {  
    "rohan/filemanager": "*"   
},  
"minimum-stability": "dev",  
"prefer-stable": true
```

---

## 3. 📥 Install the Package

Run in terminal:

```
composer require rohan/filemanager:*
```

---

## 4. 🚀 Publish Assets

```
php artisan vendor:publish --tag=filemanager-assets
```

This will copy the JS file and view files to your project.

---

## 5. ➕ Include JS in Your Layout

In `resources/views/layouts/app.blade.php`, add before `</body>`:

```
<script src="{{ asset('js/filemanager-picker.js') }}"></script>
```

---

## 6. 📄 Use in Forms

To use the file picker in your forms, use the `data-rohan-filemanager` attribute:

```
<input type="text" id="my_input" class="form-control" readonly>  
<button type="button" rohan-filemanager="#my_input">Select File</button>
```

✓ **Important:** `rohan-filemanager` is required for proper JS functionality.

---

## 7. 📁 Ensure Writable Storage Directory

Make sure this directory exists and is writable:

```
storage/app/filemanager
```

---

## 9. ☐ (Optional) Run Migrations

If needed, run:

```
php artisan migrate
```

---

✓ **Done!** Your File Manager is now installed and ready to use.
